

Allianz Technology Trust PLC

Technology investing from the heart of the industry

Aim

The Trust's objective is to achieve long-term capital growth by investing principally in the equity securities of quoted technology companies on a worldwide basis.

Trust Benefits

The award-winning Allianz Technology Trust PLC offers investors access to the fast moving world of technology with the reassurance that investment decisions are made by the highly experienced Global Technology Team which currently manages \$12bn in assets under management.

At the Heart of the Industry

Allianz Technology Trust is managed by the highly experienced Global Technology team based in San Francisco. The team benefits from its close proximity to Silicon Valley where many of the world's key technology companies are headquartered.

From 25 July 2022, discretionary portfolio management services formerly provided to Allianz Technology Trust PLC (the "Company") by Allianz Global Investors ("AllianzGI") have been delegated to Voya Investment Management Co. LLC ("Voya IM"). All members of the former AllianzGI Global Technology Team transferred to Voya IM and continue to manage the Company's portfolio. It is anticipated that there will be no change to the investment process. AllianzGI will remain the Company's AIFM (Alternative Investment Fund Manager), providing company secretarial, administration and sales and marketing services.

Share Price is the price of a single ordinary share, as determined by the stock market. The price shown above is the mid-market price.

Net Asset Value (NAV) per Share is calculated as available shareholders' funds divided by the number of shares in issue, with shareholders' funds taken to be the net value of all the company's assets after deducting liabilities. An undiluted, cum-income NAV is shown.

Premium/Discount. Since investment company shares are traded on a stock market, the share price that you get may be higher or lower than the NAV. The difference is known as a discount or premium.

Fund Manager's Review

Portfolio Overview

Allianz Technology Trust's NAV total return was -8.5% in December, compared to the Dow Jones World Technology Index return of -8.3%. During the month, stock selection detracted from relative performance, while industry allocation contributed.

Contributors

GitLab reported a strong quarter, with revenue growing 69% year-on-year despite building macro challenges. Unlike the prior quarter, in which GitLab saw no macro impact, management noted additional deal scrutiny and modestly slower expansion and upsell. These impacts were counterbalanced by the largest quarter of first orders in company history with new customer bookings up 75% year-on-year. These results reflect the success of GitLab's platform approach that consolidates a variety of disparate point-solutions across the DevOps toolchain (DevOps combines development and operations to increase the efficiency, speed, and security of software development and delivery compared to traditional processes.)

Broadcom reported quarterly results that were slightly ahead of expectations, while next quarter's revenue guidance was ahead of consensus estimates. The company continues to see strong, sustained demand in most end-markets. Management noted networking, storage, and broadband are all expected to see more than 20% year-on-year growth in the first fiscal quarter of 2023. In addition, despite Covid dynamics in China, Broadcom sees flat sequential trends in wireless for the first quarter. Finally, the company has decided to resume its share repurchase program, with \$13B authorised remaining. Overall, Broadcom continues to execute well in the current macro environment, as it appears to be performing better than some industry peers.

Other top contributors included underweight positions to Apple Inc. and Alphabet Inc., and an overweight position to MongoDB, Inc.

“ the use of technology accelerated as a result of the crisis and may have permanently changed how we live and work

Detractors

Palo Alto Networks, Inc. delivered another strong quarter, with revenue and billings growth exceeding expectations. The highlight of the quarter was the company's Next Generation Security annual recurring revenue (ARR) growth of 67%, which accelerated sequentially from 60%. However, Palo Alto indicated that it observed the challenging macro environment begin to result in changing customer behaviors such as greater deal scrutiny, more favourable deal terms, and elongating sales cycles. As a result, the company frontloaded the hiring of salespeople to improve coverage while also shifting its focus to increased profitability and strong execution.

Zscaler, Inc. posted a solid quarter with revenue and earnings topping estimates. Total revenue grew 54% year-over-year as the company continues to see strong demand for its security solutions. Zscaler has done particularly well with capitalising on emerging market opportunities including within the federal segment, which had a very strong quarter after receiving FedRAMP certification for its Private Access and Zero Trust Exchange platform (The Federal Risk and Authorization Management Program (FedRAMP) is a US government-wide program that provides a standardised approach to security assessment, authorisation, and continuous monitoring for cloud products and services.) Despite the challenging macro environment, we continue to believe Zscaler is a leader in security as this cloud cyber security shift accelerates over the next decade.

Other top detractors included not owning Tencent Holdings Ltd. and overweight positions to Tesla Inc. and ON Semiconductor Corp.

Mike Seidenberg, Lead Portfolio Manager

Michael Seidenberg received his BS in Business Administration from the University of Colorado in 1990. He received his Master of Business Administration from Columbia Business School in 1996 with concentrations in Finance and Accounting. Prior to attending Columbia Business School, Michael worked for Roche Laboratories (a division of Hoffman LaRoche) in pharmaceutical and biotechnology sales. From 1996-2001, he worked in the software industry in a variety of roles and spent time at Oracle Corporation. He began his investing career with Citadel Investment Group in 2001 covering the software space. Over the next 8 years he broadened his coverage list to include a variety of technology sectors. Prior to joining the Global Technology team in Sept 2009, Michael worked at a number of hedge funds including Pequot Capital and Andor Capital.

Market Outlook

Our expectation is that the recent decline in technology stocks could translate to an attractive opportunity for long-term investors as the technology sector is likely to continue benefiting from secular tailwinds which should, we believe, drive capital appreciation over time. While the Covid appears to be increasingly in the rearview mirror, the use of technology accelerated as a result of the crisis and may have permanently changed how we live and work and has translated to a further embrace of technology usage. Having said this, we are cognisant of the scrutiny on IT budgets and the potential challenge near term. In addition, many companies remain challenged to find workers to meet customer demands and are likely to further leverage technology-based solutions to improve productivity of limited staffs. As companies need to reduce costs and improve productivity, particularly in light a potentially uncertain macroeconomic outlook, we expect to see accelerating demand for innovative and more productive solutions such as cloud, software-as-a-service, artificial intelligence, cyber security, etc. We are in a period of rapid change, where the importance of technology is key to the prosperity of most industries. We believe that this environment is likely to provide attractive growth opportunities in many technology stocks over the next several years.

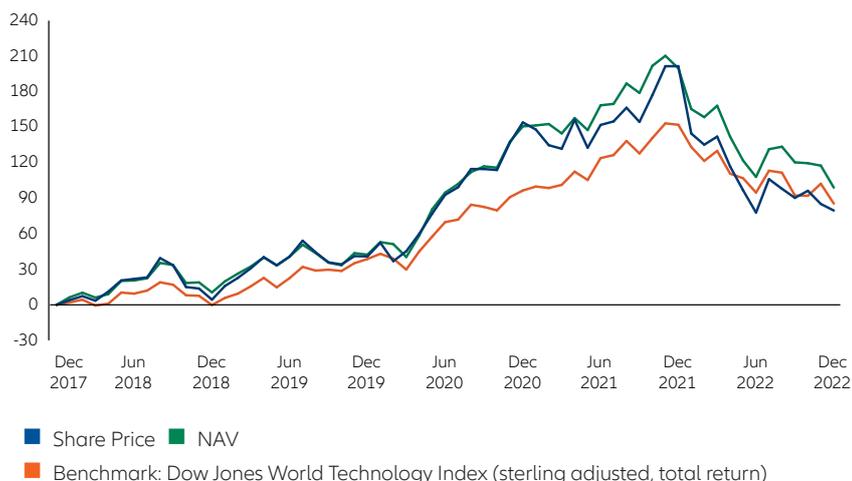

At the end of December, the portfolio remained overweight in software and IT services stocks, thanks to their attractive bottom-up stock potential relative to the benchmark. Conversely, the portfolio is underweighted in technology hardware and interactive media stocks, where near-term prospects were less attractive. We continue to believe the technology sector can provide some of the best absolute and relative return opportunities in the equity markets — particularly for bottom-up stock pickers with proven long-term selection capabilities.

Performance Track Record

Five Year Performance (%)

Risk & Features

Investment trusts are quoted companies listed on the London Stock Exchange. Their share prices are determined by factors including the balance of supply and demand in the market.

Competition among technology companies may result in aggressive pricing of their products and services, which may affect the profitability of the companies in which the Trust invests. In addition, because of the rapid pace of technological development, products or services developed by these companies may become rapidly obsolete or have relatively short product cycles. This may have the effect of making the Trust's returns more volatile than the returns of a fund that does not invest in similarly related companies.

Derivatives can be used to manage the Trust efficiently.
