

Fund Manager's Review**Walter Price****Portfolio Highlights**

The Trust's NAV was up by 1.23% in June, outperforming the benchmark which fell by 4.14%; both stock selection and industry allocation decisions had a positive effect on relative performance.

At the stock level, electric vehicle and powertrain manufacturer, Tesla Motors, was again among the top contributors to active performance.

Tesla's share price has more than tripled since the beginning of the year amid reports of strong demand for the company's Model S family saloon. In June, Tesla's management unveiled plans to implement a battery swapping system that will allow drivers to exchange their Model S battery for a fully charged one in about 90 seconds. These systems will be available at "Supercharging" stations that already give Tesla owners about 200 miles of driving range on a charge of 20-30 minutes. These systems are part of a greater plan to alleviate the "range anxiety" issues some drivers still feel about electric vehicles. We think these systems could continue to drive the mass adoption of electric vehicles and we see Tesla leading the charge.

Our significant underweight position in Apple was also a major contributor to relative performance. We began selling down our position last autumn based on our view that margins had peaked and the company would face stiffer competition going forward. We ultimately exited our position in June as we continue to see a rough path ahead for the company given market saturation in the high-end smartphone market, ongoing margin pressure from increasing component prices, and product development that seems more evolutionary rather than revolutionary.

Other top contributors included overweight positions in memory chip manufacturer Micron Technology and solar systems maker SunPower as well as being underweight in Samsung.

Japanese datacentre operator Bit-isle was the top detractor during the month. Shares fell after the company reported disappointing sales and earnings figures in its latest quarterly report. We continue to like Bit-isle due to its strategic positioning in the Internet data centre industry which we expect to experience strong growth driven by increased data demands over mobile devices and favourable trends in corporate continuity planning.

Network security solution provider Palo Alto Networks was also among the top detractors. At the end of May, the company reported fiscal third quarter revenue figures that lagged analysts' estimates and issued guidance for the fourth quarter that also fell short. Management cited challenging economic conditions in Europe and a pull-back in spending among government clients as headwinds. We believe the company still has considerable room to maintain above-average sales growth based on its strong product portfolio and positioning in one of the fastest growing markets in the technology sector. We expect businesses and governments will spend a growing percentage of their IT budgets on security solutions as more and more sensitive data is transmitted over the Internet.

Market Outlook

Broadly, we think technology companies should benefit from improvement in business technology spending trends over the coming years. US corporations currently have record amounts of cash on their balance sheets and have experienced profit growth of over 100% since 2008. After severe underinvestment in technology for the past few years, we expect companies could start to increase their technology spending particularly on consumer-facing software solutions.

In addition, we think there are certain growth areas within technology that could gain further momentum especially in a more pro-investment environment. These are companies we believe should demonstrate above-sector growth through the introduction of a differentiated technology or experiencing robust business momentum. Currently, we have positioned our portfolio so that it may benefit from areas of growth such as cloud computing, communications infrastructure upgrades, and applications on smartphones and other mobile devices.

We acknowledge that risks are still present in the form of uncertainty regarding the full implications of federal spending cuts in the United States as well as the potential for stalled policy or economic progress in Europe and Asia. Still, with low valuations and growing yields, many technology stocks have good support. We believe that the ongoing alleviation of these risks, improved corporate demand, and certain unique growth drivers could set the stage for the next secular bull market in technology.

Risks & Features

Investment trusts are quoted companies listed on the London Stock Exchange. Their share prices are determined by factors including the balance of supply and demand in the market, which means that the shares may trade below (at a discount to) or above (at a premium to) the underlying net asset value.

Competition among technology companies may result in aggressive pricing of their products and services, which may affect the profitability of the companies in which the Trust invests. In addition, because of the rapid pace of technological development, products or services developed by these companies may become rapidly obsolete or have relatively short product cycles. This may have the effect of making the Trust's returns more volatile than the returns of a fund that does not invest in similarly related companies.

Investment trusts can enhance returns through gearing. This can boost a Trust's returns when investments perform well, though losses can be magnified when investments lose value. This Trust does not currently employ gearing. Derivatives can be used to manage the Trust efficiently.

How to Invest

The Trust is a UK public limited company traded openly on the stock market. You can purchase shares through a stock broker. Shares in the Trust can be held within an ISA and/or savings scheme and a number of providers offer this facility. A list of suppliers is available on our website.
