

Aim

The Trust's objective is to achieve long-term capital growth by investing principally in the equity securities of quoted technology companies on a worldwide basis with the aim of achieving long-term capital growth.

Risks & Features

Investment trusts are quoted companies listed on the London Stock Exchange. Their share prices are determined by factors including the balance of supply and demand in the market, which means that the shares may trade below (at a discount to) or above (at a premium to) the underlying net asset value.

Competition among technology companies may result in aggressive pricing of their products and services, which may affect the profitability of the companies in which the Trust invests. In addition, because of the rapid pace of technological development, products or services developed by these companies may become rapidly obsolete or have relatively short product cycles. This may have the effect of making the Trust's returns more volatile than the returns of a fund that does not invest in similarly related companies.

Investment trusts can enhance returns through gearing. This can boost a Trust's returns when investments perform well, though losses can be magnified when investments lose value. This Trust does not currently employ gearing. Derivatives are used to manage the Trust efficiently.

History

The Trust was launched in December 1995 as a way for investors to gain exposure to quoted technology companies on a worldwide basis with the aim of achieving long-term capital growth. The Board appointed RCM to manage the trust's assets from April 2007. The decision was based on the performance of RCM's US-based technology team, their experience and RCM's depth of expertise in the management of investment trusts.

Fund Manager's Review

Walter Price

The RCM Technology Trust returned -1.87% for the month, underperforming its benchmark, the DJ World Technology Index-TR(£), which declined approximately 0.91% during the period. Stock selection was slightly positive and sector weighting was slightly negative for the month.

June was a period of growing fear of a default in Greece, and as a result, many technology stocks declined in that period, and investors seemed to gravitate away from risky stocks. For example, our largest negative attribution effect for the month came from not owning Microsoft, which was perceived as a safe stock and which announced a price increase for some of its products despite the weak economy. We had positioned the portfolio somewhat more conservatively, but we were still hurt by small positions in Sina and Phoenix New Media, two Chinese portals. We also were hit by concerns that business at Citrix might not meet high expectations, so that stock declined over 9% in the month. Gains in other enterprise companies were only modest offsets.

As the month ended, there was a strong rally in tech stocks and the market, as the situation in Greece improved and fear of a double dip receded. If the different budget talks conclude successfully, we think technology stocks could do well in the year ahead, as a slow economy favours many technology trends that reduce costs and improve productivity. We are encouraged by the record levels of cash at technology companies and decent liquidity in other industries, which supports a steady acquisition environment and continued investment in productivity. Recently, expectations for many companies have begun to be reduced, and inputs from our recent trip to Taiwan are that demand in many electronics sectors is less than usual for this season. We had trimmed the portfolio of stocks where we thought expectations were too high, and are now doing selectively buying.

Standardised past performance figures comply with the Financial Services Authority's regulations to enable investors to compare different products from different providers.

Past performance is not a reliable indicator of future performance. You should not make any assumptions on the future on the basis of performance information. The value of an investment and the income from it can fall as well as rise as a result of market fluctuations and you may not get back the amount originally invested.

RCM were appointed managers of this Trust on 30th April 2007.

Subscription Shares

Following the approval of special resolutions at an extraordinary general meeting in August 2007, 4,770,568 RCM Technology Trust Subscription Shares have been listed. Qualifying shareholders received one Subscription Share for every five Ordinary Shares held by them on 17.08.07. These are qualifying investments for stocks and shares ISAs. Each Subscription Share is capable of conversion, on notification to the Company in the thirty days preceding the annual general meeting in any of the years 2008 to 2012 (inclusive), into one Ordinary Share on the date of the relevant annual general meeting. The Conversion Price of the Subscription Shares will be 267p, which represented a 10% premium to the Net Asset Value per Share (calculated on an undiluted basis and in accordance with the basis set out in the prospectus dated 18.07.07) as at the close of business on 14.08.07.
