

Allianz Technology Trust PLC

Technology investing from the heart of the industry

Aim

The Trust's objective is to achieve long-term capital growth by investing principally in the equity securities of quoted technology companies on a worldwide basis.

Trust Benefits

The award-winning Allianz Technology Trust PLC offers investors access to the fast moving world of technology with the reassurance that investment decisions are made by Walter Price who has 40 years of experience of investing in technology. He is Co-Head of the AllianzGI Global Technology Team which currently manages \$4bn in assets under management.

At the Heart of the Industry

Allianz Technology Trust is managed by the highly experienced AllianzGI Global Technology team based in San Francisco. The team benefits from its close proximity to Silicon Valley where many of the world's key technology companies are headquartered.

Share Price is the price of a single ordinary share, as determined by the stock market. The price shown above is the mid-market price.

Net Asset Value (NAV) per Share is calculated as available shareholders' funds divided by the number of shares in issue, with shareholders' funds taken to be the net value of all the company's assets after deducting liabilities. An undiluted, cum-income NAV is shown.

Premium/Discount. Since investment company shares are traded on a stock market, the share price that you get may be higher or lower than the NAV. The difference is known as a discount or premium.

Fund Manager's Review

Portfolio Overview

The Trust's NAV fell by 4.7% in May, outperforming the Dow Jones World Technology Index return of -6.5%. During the month, both stock selection and industry allocation contributed to relative performance.

Our position in Okta was the top contributor in May after reporting strong quarterly results with 50% revenue growth year-on-year. Okta is a data security provider offering services such as automated user management, integration, mobile identification, multifactor authentication, and reporting software. Okta has a compelling opportunity to disrupt the large market for identity and access management. With a large number of applications and over 5,000 customers, Okta is beginning to see a network effect developing. The company also benefits from the shift to the cloud as customers looking for an identity management solution for cloud applications are attracted to the wide range of applications. Management noted that subscription revenue was driven by the company's acceleration with enterprise customers. The world's largest organisations are increasingly realising that identity security is essential to their cloud, digital transformation, and security initiatives.

Our position in cloud security company Zscaler was also a top contributor in May after delivering impressive quarterly results with revenue growth of 61% year-on-year. The company operates as a Security-as-a-Service company, offering a cloud-based security platform. The platform provides web and mobile security, threat protection, cloud application visibility, and cloud-enabled networking solutions. Customers are increasingly adopting Zscaler's products, which provide a single platform to enforce business

“ Our exposure to the cloud and artificial intelligence themes is spread across multiple companies in the portfolio, as we believe this approach offers a more attractive risk/reward profile.

and security policy for their users to access multiple applications and services.

Other top active contributors included overweight positions in Paycom Software and AVEVA Group and not owning Apple.

Our underweight position in Microsoft was the top detractor from relative performance. Shares outperformed the technology sector following the release in April of very strong quarterly results driven by broad-based strength in its cloud business. Commercial cloud grew 34%, which is very impressive given the size of this business segment, and its Azure segment grew about 75% year over year. We are seeing an inflection of demand from enterprise customers as more companies move their workloads to the cloud. Microsoft should continue to benefit from this shift over time given their strong long-term relationships with enterprise customers. At the current pace of growth, it is likely that Microsoft's cloud business alone could become one of the largest technology platforms in the world. Microsoft has been investing in data centres and developing partnerships to boost sales of its main cloud products, which appears to be paying off for the company. We are underweight relative to the benchmark's large position in the stock. Our exposure to the cloud and artificial intelligence themes is spread across multiple companies in the portfolio, as we believe this approach offers a more attractive risk/reward profile.

Cloud networking software and hardware provider, Arista Networks, was also a top relative detractor during the period. The company delivered solid first quarter 2019 results with revenue up 26%, earnings up 39%, and billings up 32% year over year. However, Arista's second quarter revenue guidance fell short of consensus estimates, which management attributed

Walter Price CFA, Portfolio Manager

Allianz Technology Trust PLC is managed by Walter Price who is a Managing Director and Co-Head of the AllianzGI Technology Team in San Francisco, having joined in 1974. Walter is a current Director and past president of the M.I.T. Club of Northern California. He also heads the Educational Council for M.I.T. in the Bay Area and is a past Chairman of the AIMR Committee on Corporate Reporting for the computer and electronics industries.

to delayed capital expenditures by a couple of large cloud customers following their strong 2018 investments. Arista provides cloud networking software and hardware for Internet and Cloud service providers, as well as next generation datacentres. Its products include modular cloud networking platforms that enable in-service upgrades and application extensibility. End-demand and Arista's competitive position remain strong in the cloud segment.

Other top active detractors included overweight positions in Pure Storage, DXC Technology, and Cree.

Market Outlook

We continue to believe the technology sector can provide some of the best absolute and relative return opportunities in the equity markets – especially for bottom-up stock pickers. The growth in technology is coming from the creation of new markets, rather than simply GDP growth. Investors need to find companies generating organic growth by creating new markets or effecting significant change on old markets. Industries such as automobiles, advertising, security, retail, and manufacturing are all being shaped and transformed by advances in technology.

We are seeing an ongoing wave of innovation in the sector that we believe has the potential to produce attractive returns for companies with best-in-class solutions. We also see a number of companies with present valuations that, in our view, do not fully reflect positive company- and/or industry-specific tailwinds.

Despite high valuations for some high growth companies, we continue to see massive addressable markets much larger than the revenue today. However, we have consolidated our exposure to these areas in select companies having the most compelling solutions and whose business models demonstrate a discernible path to deliver strong earnings and cash flow growth over the next few years.

We are also finding excellent investment opportunities among more attractively valued areas of technology. In particular, certain technology incumbents are making compelling progress on their “as-a-service” offerings.

We will continue carefully balancing risks and opportunities, leveraging our industry expertise, and emphasising individual stock selection.

Walter Price

Performance Track Record

Five Year Performance (%)

Risk & Features

Investment trusts are quoted companies listed on the London Stock Exchange. Their share prices are determined by factors including the balance of supply and demand in the market.

Competition among technology companies may result in aggressive pricing of their products and services, which may affect the profitability of the companies in which the Trust invests. In addition, because of the rapid pace of technological development, products or services developed by these companies may become rapidly obsolete or have relatively short product cycles. This may have the effect of making the Trust's returns more volatile than the returns of a fund that does not invest in similarly related companies.

Derivatives can be used to manage the Trust efficiently.

Cumulative Returns (%)

	3M	6M	1Y	3Y	5Y
