

# Allianz Technology Trust PLC

Technology investing from the heart of the industry

## Aim

The Trust's objective is to achieve long-term capital growth by investing principally in the equity securities of quoted technology companies on a worldwide basis.

## Trust Benefits

The award-winning Allianz Technology Trust PLC offers investors access to the fast moving world of technology with the reassurance that investment decisions are made by Walter Price who has 40 years of experience of investing in technology. He is Co-Head of the AllianzGI Global Technology Team which currently manages \$4bn in assets under management.

## At the Heart of the Industry

Allianz Technology Trust is managed by the highly experienced AllianzGI Global Technology team based in San Francisco. The team benefits from its close proximity to Silicon Valley where many of the world's key technology companies are headquartered.

## Awards & Ratings

A ranking, a rating or an award provides no indicator of future performance and is not constant over time.

NAV per Share

**1626.5p**

Premium/-Discount

**0.8%**

**Share Price** is the price of a single ordinary share, as determined by the stock market. The price shown above is the mid-market price.

**Net Asset Value (NAV) per Share** is calculated as available shareholders' funds divided by the number of shares in issue, with shareholders' funds taken to be the net value of all the company's assets after deducting liabilities. An undiluted, cum-income NAV is shown.

**Premium/Discount.** Since investment company shares are traded on a stock market, the share price that you get may be higher or lower than the NAV. The difference is known as a discount or premium.

## Fund Manager's Review

### Portfolio Overview

The Trust's NAV rose by 5.8% in April, against a benchmark return of 6.1%. During the month, stock selection contributed and industry allocation detracted from relative performance.

Our position in Okta was the top relative contributor in April. During the company's annual Oktane conference and analyst day, management highlighted new product innovations designed to help clients manage complex access solutions for their modern workforces. Okta is a data security provider offering services such as automated user management, integration, mobile identification, multifactor authentication, and reporting software. Okta has a compelling opportunity to disrupt the large market for identity and access management. With a large number of applications and over 5,000 customers, Okta is beginning to see a network effect developing. The company also benefits from the shift to the cloud as customers looking for an identity management solution for cloud applications are attracted to the wide range of applications.

Our position in semiconductor testing equipment maker, Teradyne, was also a top relative contributor in April. The company reported quarterly financial results that exceeded expectations, with the revenue upside driven by 5G wireless infrastructure related device testing in the Semiconductor Test business segment. The company's testing equipment is used across a variety of electronic components and end markets including mobility and automotive systems. We see growth potential in Teradyne's non-semiconductor testing business lines including the universal robot business, which we see as a beneficiary of the trend

**“ Investors need to find companies generating organic growth by creating new markets or effecting significant change on old markets**

toward increased industrial automation.

Other top active contributors included an overweight position in Cree and underweight positions in Alphabet (Google's parent) and Intel.

Our position in cloud security company Zscaler was a top relative detractor in April. Shares retraced some of the gains generated in March after the company's financial results surpassed expectations driven by revenue growth of 65% year over year. Management raised guidance due to the strong pipeline for new business and upsell opportunities with existing customers. The company operates as a security-as-a-service company, offering a cloud-based security platform. The platform provides web and mobile security, threat protection, cloud application visibility, and cloud-enabled networking solutions.

Our position in Square was also a top relative detractor during the period. The company develops business management software for small- & medium-sized businesses (SMB) and monetises many of these products through transaction processing. Shares lagged the market during April as investors awaited the release of first quarter earnings results in early May. Square continues to execute well against its goals of moving to larger sellers, expanding internationally, and building e-commerce tools. The company has been effectively adding new services to its platform to make the total value proposition more compelling for customers.

Other top active detractors included underweight positions in Microsoft and Qualcomm and an overweight position in MongoDB.

### Walter Price CFA, Portfolio Manager

Allianz Technology Trust PLC is managed by Walter Price who is a Managing Director and Co-Head of the AllianzGI Technology Team in San Francisco, having joined in 1974. Walter is a current Director and past president of the M.I.T. Club of Northern California. He also heads the Educational Council for M.I.T. in the Bay Area and is a past Chairman of the AIMR Committee on Corporate Reporting for the computer and electronics industries.

### Market Outlook

Our view is that technology is well-positioned to remain a major driver of market returns. The ongoing digital transformation among corporations should continue to drive growth in IT spending. Feedback from our discussions with company management teams, as well as management surveys from multiple sources, indicate that companies across the economy are turning to technology solutions to increase revenue, improve productivity, and enhance operating efficiency. We believe this is a multi-year transition which is still in the very early stages. While the largest technology companies today will inevitably struggle to grow as rapidly in the future, the broad technology sector should continue to see attractive growth in the future.

We continue to believe the technology sector can provide some of the best absolute and relative return opportunities in the equity markets – especially for bottom-up stock pickers. The growth in technology is coming from the creation of new markets, rather than simply economic growth. Investors need to find companies generating organic growth by creating new markets or effecting significant change on old markets. Industries such as automobiles, advertising, security, retail, and manufacturing are all being shaped and transformed by advances in technology.

We are seeing an ongoing wave of innovation in the sector that we believe has the potential to produce attractive returns for companies with best-in-class solutions. We also see a number of companies with present valuations that, in our view, do not fully reflect positive company- and/or industry-specific tailwinds.

Despite high valuations for some high growth companies, we continue to see massive addressable markets much larger than the revenue today. However, we have consolidated our exposure to these areas in select companies having the most compelling solutions and whose business models demonstrate a discernible path to deliver strong earnings and cash flow growth over the next few years.

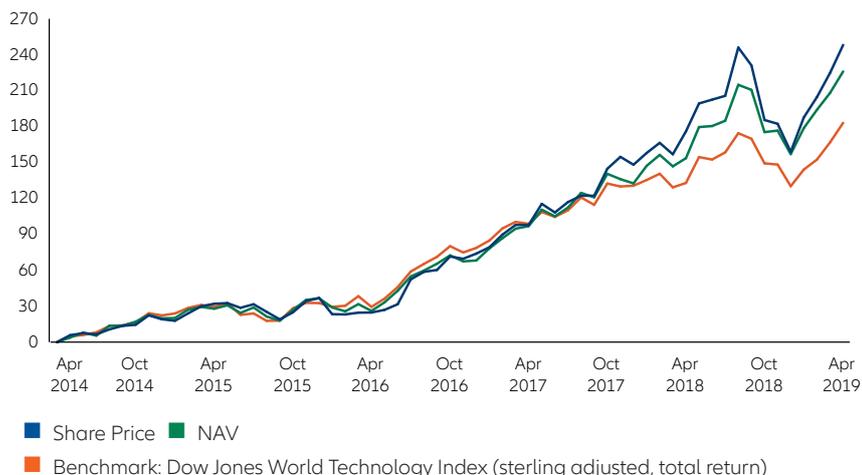

We will continue carefully balancing risks and opportunities, leveraging our industry expertise, and emphasizing individual stock selection.

**Walter Price**

## Performance Track Record

### Five Year Performance (%)

## Risk & Features

Investment trusts are quoted companies listed on the London Stock Exchange. Their share prices are determined by factors including the balance of supply and demand in the market.

Competition among technology companies may result in aggressive pricing of their products and services, which may affect the profitability of the companies in which the Trust invests. In addition, because of the rapid pace of technological development, products or services developed by these companies may become rapidly obsolete or have relatively short product cycles. This may have the effect of making the Trust's returns more volatile than the returns of a fund that does not invest in similarly related companies.

Derivatives can be used to manage the Trust efficiently.

### Cumulative Returns (%)

	3M	6M	1Y	3Y	5Y
