

## Investment Rationale

From entertainment to manufacturing and from education to energy, technology has the ability to change lives on a global scale. The RCM Technology Trust connects investors to this fast-moving world. The Trust is managed by Walter Price, Managing Director and co-head of the award-winning RCM global technology team. Based in San Francisco, the team has specialist research resources which enhance its expertise in this sector. Walter Price has been analysing technology stocks for more than 35 years.

## Aim

The Trust's objective is to achieve long-term capital growth by investing principally in the equity securities of quoted technology companies on a worldwide basis.

## History

The Trust was formed in December 1995 and re-launched by RCM in 2007 as a way for investors to gain exposure to quoted technology companies on a worldwide basis with the aim of achieving long-term capital growth. The Board appointed RCM to manage the Trust's assets from April 2007 based on the performance of RCM's US-based technology team, their experience and RCM's depth of expertise in the management of investment trusts.

## Fund Manager's Review

### Walter Price

RCM Technology Trust was down 4.04% for the month, slightly underperforming its benchmark, the Dow Jones World Technology Index (£), which was down 3.7% during the period.

Stock selection detracted for the month, but we benefited from our large underweight in Japanese stocks, and from our large cash holdings. Our portfolio had several positive and negative stock impacts. On the negative side, the PC-related stocks were negatively impacted by Dell's dour forecast, and some of the communication and software stocks were hit after Cisco called out economic weakness, especially in Europe. We were also hurt by our overweights in Seagate and Samsung. On the positive side, we were helped by not holding Dell. Our position in Microsoft also contributed positively as did SAP after announcing its takeover of Ariba.

Our worries about the weakness in Europe flowing into results in the second quarter are unfortunately coming true. The market is now quite pessimistic about the recovery, as there is a recession in Europe and the economies of China and the US seem to be slowing. We now expect most companies to give more cautious guidance when they release their second quarter results in July, and it will likely be hard for the market to recover until those results are behind us. Europe is at a critical juncture as our economists have detected a bank run in the weaker EU countries. We are hopeful that this crisis will lead to stronger bank support by the governments there, but the market may not recover until this risk is reduced. We are still hopeful of a stock rebound later in the year, but several issues need to be resolved. There are some positive developments, as the US economy is still growing and China is stimulating its economy again, and as we look to 2013, we see many companies that can improve their earnings growth if the world economy stabilises.

## Performance (%)

## Cumulative Performance (%)

Benchmark: Dow Jones World Technology Index (Sterling Adjusted).

Past performance is not a reliable indicator of future performance. You should not make any assumptions on the future on the basis of performance information. The value of an investment and the income from it can fall as well as rise as a result of market fluctuations and you may not get back the amount originally invested.

RCM was appointed manager of this Trust on 30th April 2007.

## Capital Structure

Total Assets:	£93.0m
Shares in Issue:	26,911,635 (Ordinary 25p)
Ordinary Share Price <sup>1</sup> :	299.0p
Net Asset Value (Ordinary) <sup>3</sup> :	345.5p
Premium/-Discount to NAV <sup>2</sup> :	-6.9%
NAV Frequency	Daily

1. Source: Lipper as at 31.05.12, market close mid price.

3. A trust's net asset value (NAV) is calculated as available shareholders' funds divided by the number of shares in issue, with shareholders' funds taken to be the net value of all the company's assets after deducting liabilities. An undiluted, cumulative NAV is shown.

## Risks & Features

Investment trusts are quoted companies listed on the London Stock Exchange. Their share prices are determined by factors including the balance of supply and demand in the market, which means that the shares may trade below (at a discount to) or above (at a premium to) the underlying net asset value.

Competition among technology companies may result in aggressive pricing of their products and services, which may affect the profitability of the companies in which the Trust invests. In addition, because of the rapid pace of technological development, products or services developed by these companies may become rapidly obsolete or have relatively short product cycles. This may have the effect of making the Trust's returns more volatile than the returns of a fund that does not invest in similarly related companies.

Investment trusts can enhance returns through gearing. This can boost a Trust's returns when investments perform well, though losses can be magnified when investments lose value. This Trust does not currently employ gearing. Derivatives are used to manage the Trust efficiently.
