

Investment Rationale

From entertainment to manufacturing and from education to energy, technology has the ability to change lives on a global scale. The RCM Technology Trust connects investors to this fast-moving world. The Trust is managed by Walter Price, Managing Director and co-head of the award-winning RCM global technology team. Based in San Francisco, the team has specialist research resources which enhance its expertise in this sector. Walter Price has been analysing technology stocks for more than 35 years.

Aim

The Trust's objective is to achieve long-term capital growth by investing principally in the equity securities of quoted technology companies on a worldwide basis with the aim of achieving long-term capital growth.

History

The Trust was formed in December 1995 and re-launched by RCM in 2007 as a way for investors to gain exposure to quoted technology companies on a worldwide basis with the aim of achieving long-term capital growth. The Board appointed RCM to manage the Trust's assets from April 2007 based on the performance of RCM's US-based technology team, their experience and RCM's depth of expertise in the management of investment trusts.

Fund Manager's Review

Walter Price

Portfolio Review

RCM Technology Trust declined 0.77% for the month versus the benchmark which was down 0.43%.

After the rebound in the market during October, the market in November was down as concerns about Europe again reappeared. Economic and Company commentary reinforced this trend, with several European companies reporting some weakness in their business during October and November, such as Alcatel-Lucent. Salesforce.com also reported lower growth in billings than in the previous quarter, leading to weakness in that stock.

Apple was a top detractor from performance on an absolute basis—production cutbacks in iPads hurt earnings, but our underweight in the stock turned out favourable for the portfolio relative to the Trust's benchmark. Skyworks, a wireless component company, detracted from performance on an absolute and relative basis due to weakness in customers such as Nokia, and Research In Motion. Tesla Motors was the top contributor on an absolute and relative basis as good reviews of its new Model S helped the stock increase in value.

Market Outlook

We continue to expect solid growth in the technology space in 2012, and we believe the period of confession about lower growth rates and estimates is over. This backdrop may allow companies to beat expectations if the economy can maintain a moderate growth rate in 2012. So far, the fear of a recession in 2012 has not been enough to stop most technology projects. At the same time, we have tempered our expectations about growth in Europe for next year while the US outlook seems slightly better. Of course, the market has not discounted a default in Europe; however, absent that event, we expect many technology stocks will continue to rally in the fourth quarter if present encouraging trends continue.

Past performance is not a reliable indicator of future performance. You should not make any assumptions on the future on the basis of performance information. The value of an investment and the income from it can fall as well as rise as a result of market fluctuations and you may not get back the amount originally invested.

RCM was appointed manager of this Trust on 30th April 2007.

Subscription Shares

Following the approval of special resolutions at an extraordinary general meeting in August 2007, 4,770,568 RCM Technology Trust Subscription Shares have been listed. Qualifying shareholders received one Subscription Share for every five Ordinary Shares held by them on 17.08.07. These are qualifying investments for stocks and shares ISAs. Each Subscription Share is capable of conversion, on notification to the Company in the thirty days preceding the annual general meeting in any of the years 2008 to 2012 (inclusive), into one Ordinary Share on the date of the relevant annual general meeting. The Conversion Price of the Subscription Shares is 267p, which represents a 10% premium to the Net Asset Value per Share (calculated on an undiluted basis and in accordance with the basis set out in the prospectus dated 18.07.07) as at the close of business on 14.08.07.

Risks & Features

Investment trusts are quoted companies listed on the London Stock Exchange. Their share prices are determined by factors including the balance of supply and demand in the market, which means that the shares may trade below (at a discount to) or above (at a premium to) the underlying net asset value.

Competition among technology companies may result in aggressive pricing of their products and services, which may affect the profitability of the companies in which the Trust invests. In addition, because of the rapid pace of technological development, products or services developed by these companies may become rapidly obsolete or have relatively short product cycles. This may have the effect of making the Trust's returns more volatile than the returns of a fund that does not invest in similarly related companies.

Investment trusts can enhance returns through gearing. This can boost a Trust's returns when investments perform well, though losses can be magnified when investments lose value. This Trust does not currently employ gearing. Derivatives are used to manage the Trust efficiently.
